

2023 Radio Controller Supplement

to

Construction of a Rampaging Chariot

Pages 12, 13, 14, 47, 48 and 50 of this manual describe the Radio Controller and how to connect its receiver, to allow control of your Chariot.

For 2023, a different Radio Controller model has been supplied with your kit:

The Perkins Planet TS2+2:

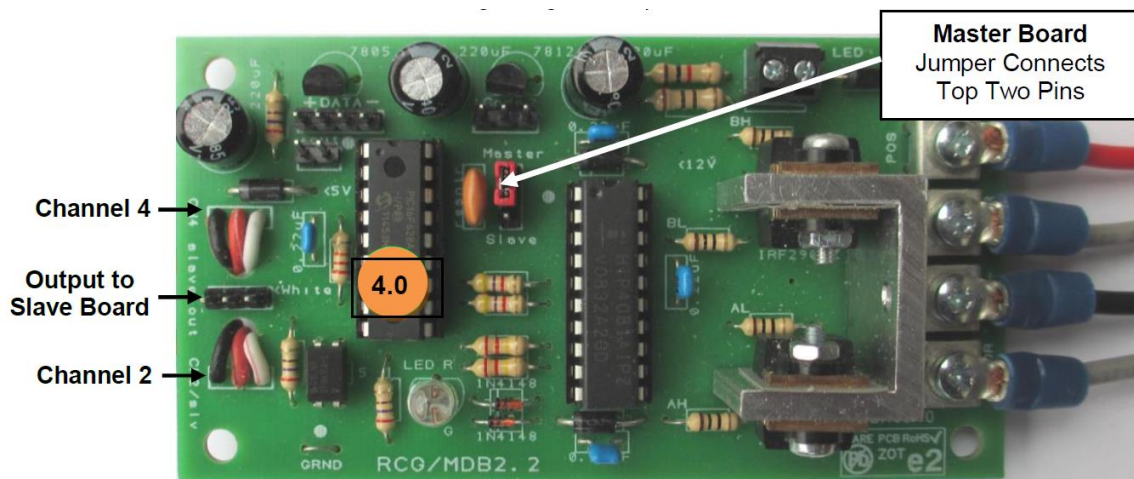

Some minor differences mean that the information contained on the above pages is now out of date.

The new Radio Controller has only 2 channels, rather than 4.

- **Channel 1** is controlled by the right hand stick (we use this for turning left and right).
- **Channel 2** is controlled by the left hand stick (used for moving forwards and backwards)

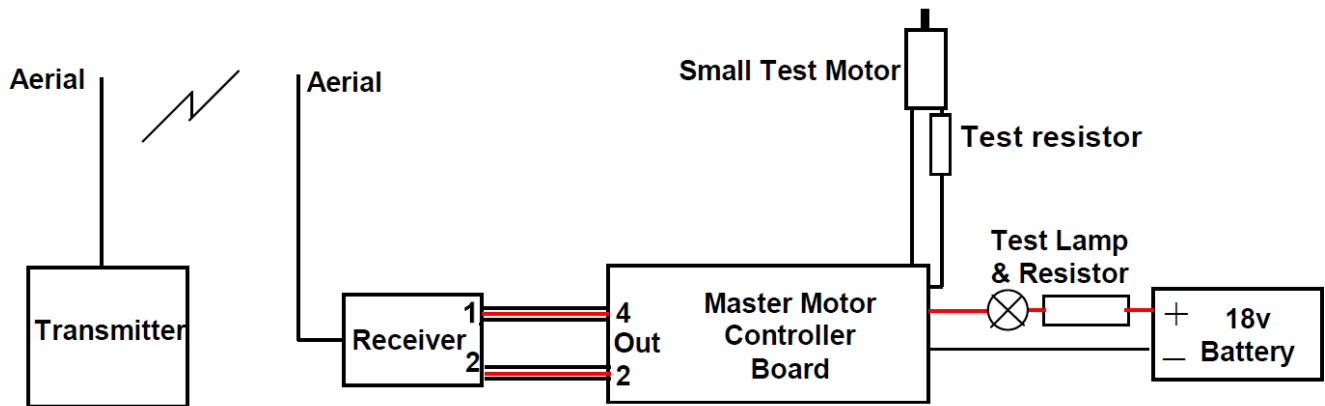

The previous Radio controllers used Channel 4 to turn left and right, and your circuit board has a lead labelled "CH4". To use the new controller, you will need to plug the "CH4" lead from your Master circuit board into the Channel 1 plug on your receiver. "CH2" should be connected to the Channel 2 plug as before.

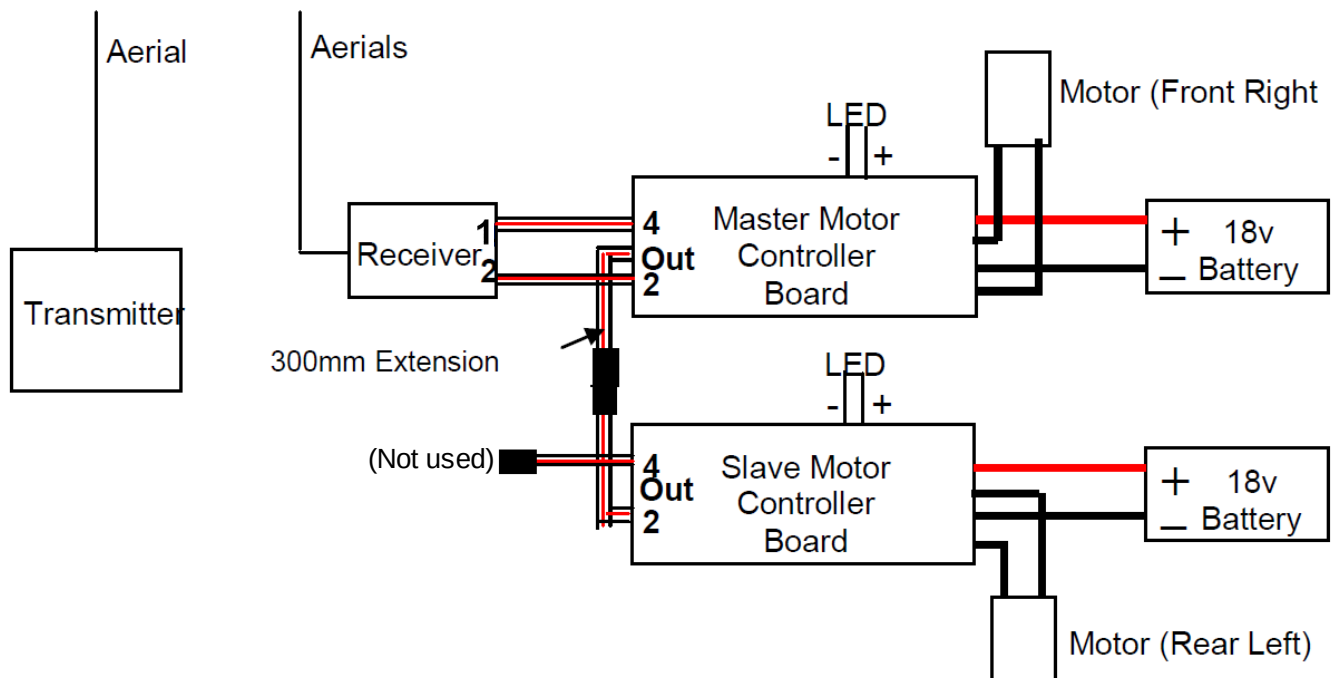

Receiver

Connection Diagrams

For testing (pages 47 and 48), your receiver should now be connected like this:

For driving your Chariot (page 50), your receiver should now be connected like this:

Further Information

Other information contained on page 14 remains relevant for the new controllers. For specific information on receiver binding, servo reversing and dual rate controls, refer to the Instruction Booklet supplied in the box with your controller.
